

ARYAN BATRA

Jammu & Kashmir, India | (+91) 9149469833 | batraaryan03@gmail.com | [LinkedIn](#) ↗ | [GitHub](#) ↗ | [100xsystems.dev](#) ↗

Systems-focused Software Engineer with deep core interest in **backend infrastructure**, **clean architecture**, and **distributed microservices**. Pragmatic and tool-agnostic problem solver focused on rapid execution, strong Computer Science fundamentals (**concurrency**, **system design**, **data structures**), and building production-grade, highly scalable software systems.

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, C/C++, Python, Lua, SQL, HTML/CSS, Bash

Backend & Cloud Systems: Spring Boot, Hibernate, Node.js, Cloudflare Workers, REST APIs, Microservices, PostgreSQL, Turso Cloud DB, Supabase, Firebase, AWS (EC2, S3, SQS/SNS), Docker, CI/CD (Jenkins, GitHub Actions)

Observability & Tools: Prometheus, Grafana, Loki, Axiom Monitoring, Flyway, CMake, FFmpeg, Git, Microsoft Clarity, Swagger

AI & Automation: n8n, Activepieces, OpenRouter, Meta API, Groq AI, Mistral AI, Cerebras AI, Instamojo Payment, Resend Email API

Frontend & Web Graphics: React.js, Next.js, SolidJS, Three.js, React Three Fiber, Tailwind CSS, GSAP, React Flow, Storybook

WORK EXPERIENCE

A2B Digital Solutions – *Software Engineer Intern*

May 2026 – Jul 2026

Engineered production-grade backend **microservices** using **Spring Boot**, **Hibernate**, and **PostgreSQL**, managing schema migrations via **Flyway**. Configured system observability and log aggregation using **Prometheus**, **Grafana**, and **Loki**. Developed automated document generation pipelines using **OpenHtmlToPdf** and **Thymeleaf**, cutting document overhead by **40%**. Established strict **CI/CD** and unit testing standards utilizing **JUnit5**, **JaCoCo**, and **Storybook**.

100xsystems ↗ – *Founder & Lead Systems Engineer*

Feb 2026 – Present

Architected an open EdTech ecosystem and SDE bootcamp focused on **systems-level engineering**. Developed custom **CLI tools** using **Ink** and **Pastel**, built custom CMS solutions using **React Quill**, created automated feed generators, and designed custom testing suites using **Vitest** and **JUnit5** to support massive course workflows and deep technical education at scale.

Sashel – *Software Engineer Intern*

Jul 2025 – Oct 2025

Contributed to a **30+ microservices architecture** built in **Java** deployed on **AWS**. Designed relational database schemas from scratch and deployed **4 production microservices**. Designed a complex backend automation pipeline integrating AI tools like **n8n** and **Activepieces** to optimize custom Shopify operational workflows at scale.

Polarions (Sweden) – *Automation Engineer*

Oct 2025 – Nov 2025

Engineered an automated social media distribution system for an international team by orchestrating **n8n**, **Meta API**, **Facebook Graph API**, Google APIs, **Mistral AI**, and **Groq AI**. Mentored junior developers and led cross-border technical workflows.

CodeVeda Technologies – *Technical Writer & Content Engineer*

Nov 2025 – Dec 2025

Authored comprehensive curriculum and documentation for a **240-page Spring Boot course** covering REST APIs, AOP, Transactions, Caching, Redis, **Spring Security (JWT)**, and **AWS** integrations. Produced structured Python video learning material.

JU Learning – *Co-Founder & Frontend Lead*

May 2025 – Jul 2025

Co-built a centralized student learning platform using **React** and **Supabase**. Designed structured academic repositories, note distribution systems, and resource-sharing tools for university students.

FEATURED PROJECTS

StartX – *AI Startup Validation Platform* ↗

Architected a full-stack startup validation platform integrating multiple AI providers (**Groq**, **Mistral**, **Cerebras**, **ZAI APIs**) alongside **Turso Cloud DB**. Integrated **Instamojo** payment gateways, **Resend API** email triggers, **Axiom monitoring**, and dynamic diagramming with **Mermaid.js**, **React Flow**, **GSAP**, and **Motion** in **Next.js**.

Bluesky Social Media Client ↗

Built a full-featured Bluesky web client using **Next.js** featuring an Instagram-inspired UI adaptation. Implemented **multi-feed custom streams**, built-in **NSFW filtering**, content bookmarking, direct media downloading, dark mode, and an immersive browsing experience.

Signal UI – *Intent-Driven Component Library* ↗

Created an intent-driven UI architecture built on **React** and **Tailwind CSS v4**, separating components into **4 explicit layers** (Input, Dimensions, Data, State). Distributed via a custom CLI (`npx signal-layers copy`) enabling **zero-dependency**, fully-ownable component layers.

DSA-IN-3D & 3D Ray Tracing Engine ↗

Engineered a multithreaded 3D ray tracing engine from scratch in pure **Java** (**>5,000 LOC**, zero third-party engines) with photon light bouncing physics and spatial controls. Extended the engine into a **3D data structure visualizer** featuring realistic rendering and a custom fluent `.with()` API.

EDUCATION

MBS College of Engineering & Technology

Bachelor of Technology in Computer Science & Engineering

Jammu & Kashmir, India

2023 – 2027
