

Summary

PROFILE Systems-focused Software Engineer with deep core interest in backend infrastructure, clean architecture, and distributed microservices. Pragmatic and tool-agnostic problem solver focused on rapid execution, strong Computer Science fundamentals (concurrency, system design, data structures), and building production-grade, highly scalable software systems.

Technical Skills

LANGUAGES	Java, JavaScript (ES6+), TypeScript, C/C++, Python, Lua, SQL, HTML/CSS, Bash
BACKEND & CLOUD	Spring Boot, Hibernate, Node.js, Cloudflare Workers, REST APIs, Microservices, PostgreSQL, Turso Cloud DB, Supabase, Firebase, AWS (EC2, S3, SQS/SNS), Docker, CI/CD
OBSERVABILITY	Prometheus, Grafana, Loki, Axiom Monitoring, Flyway, CMake, FFmpeg, Git, Swagger
AI & AUTOMATION	n8n, Activepieces, OpenRouter, Meta API, Groq AI, Mistral AI, Cerebras AI, Instamojo
FRONTEND	React.js, Next.js, SolidJS, Three.js, React Three Fiber, Tailwind CSS, GSAP, React Flow

Experience

MAY 2026–JUL 2026	A2B Digital Solutions , <i>Software Engineer Intern</i> Engineered production-grade backend microservices using Spring Boot , Hibernate , and PostgreSQL , managing schema migrations via Flyway . Configured system observability and log aggregation using Prometheus , Grafana , and Loki . Developed automated document generation pipelines using OpenHtmlToPdf and Thymeleaf , cutting document overhead by 40%. Established strict CI/CD and unit testing standards utilizing JUnit5 , JaCoCo , and Storybook .
FEB 2026–PRESENT	100xsystems ↗, <i>Founder & Lead SDE</i> Architected an open EdTech ecosystem and SDE bootcamp focused on systems-level engineering . Developed custom CLI tools using Ink and Pastel , built custom CMS solutions using React Quill . Created automated feed generators, and designed custom testing suites using Vitest and JUnit5 to support massive course workflows and deep technical education at scale.
JUL 2025–OCT 2025	Sashel , <i>Software Engineer Intern</i> Contributed to a 30+ microservices architecture built in Java deployed on AWS . Designed relational database schemas from scratch and deployed 4 production microservices . Designed a complex backend automation pipeline integrating AI tools like n8n and Activepieces to optimize custom Shopify operational workflows at scale.
OCT 2025–NOV 2025	Polarions (Sweden) , <i>Automation Engineer</i> Engineered an automated social media distribution system for an international team by orchestrating n8n , Meta API , Facebook Graph API , Google APIs, Mistral AI , and Groq AI . Mentored junior developers and led cross-border technical workflows.
NOV 2025–DEC 2025	CodeVeda Tech. , <i>Technical Writer</i> Authored comprehensive curriculum and documentation for a 240-page Spring Boot course covering REST APIs, AOP, Transactions, Caching, Redis, Spring Security (JWT) , and AWS integrations.
MAY 2025–JUL 2025	JU Learning , <i>Co-Founder & Frontend Lead</i> Co-built a centralized student learning platform using React and Supabase , designing structured academic repositories and resource-sharing tools for university students.

Featured Projects

FULL-STACK	StartX ↗, <i>AI Startup Validation Platform</i> Architected a validation platform integrating multiple AI providers (Groq , Mistral , Cerebras) alongside Turso Cloud DB . Integrated Instamojo payment gateways, Resend API , Axiom monitoring , and dynamic diagramming with Mermaid.js , React Flow , GSAP , and Motion in Next.js .
WEB CLIENT	Bluesky Client ↗, <i>Social Media Application</i> Built a full-featured Bluesky web client using Next.js featuring an Instagram-inspired UI adaptation. Implemented multi-feed custom streams , built-in NSFW filtering , content bookmarking, direct media downloading, and dark mode.
UI LIBRARY	Signal UI ↗, <i>Intent-Driven Component Library</i> Created an intent-driven UI architecture built on React and Tailwind CSS v4 , separating components into 4 explicit layers (Input, Dimensions, Data, State). Distributed via a custom CLI (npx signal-layers copy) enabling zero-dependency , fully-ownable component layers.
3D ENGINE	DSA-IN-3D ↗, <i>Ray Tracing Engine</i> Engineered a multithreaded 3D ray tracing engine from scratch in pure Java (>5,000 LOC, zero third-party engines) with photon light bouncing physics and spatial controls. Extended the engine into a 3D data structure visualizer featuring realistic rendering and a custom fluent <code>.with()</code> API.

Education

2023–2027	MBS College of Eng. & Tech , <i>B.Tech in Computer Science</i> Jammu & Kashmir, India
