SUMMARY

Systems-focused Software Engineer with a deep core interest in **backend infrastructure**, **clean architecture**, and **distributed microservices**. Pragmatic and tool-agnostic problem solver focused on rapid execution, strong Computer Science fundamentals (**concurrency**, **system design**, **data structures**), and building **production-grade**, **highly scalable software systems**.

EDUCATION

MBS College of Engineering & Technology <i>Bachelor of Technology (B.Tech) in Computer Science</i> CGPA: 8.2/10.0	2023 – 2027 <i>Jammu & Kashmir, India</i>
Little Flower Higher Secondary School <i>12th Grade (Higher Secondary)</i> Percentage: 82.7%	2020 – 2022 <i>Jammu & Kashmir, India</i>
St. Paul's Convent High School <i>10th Grade (Secondary)</i> Percentage: 82.0%	2006 – 2020 <i>Jammu & Kashmir, India</i>

TECHNICAL SKILLS

Languages: Java, JavaScript (ES6+), TypeScript, C/C++, Python, SQL, Bash, Kotlin, Dart, Lua, HTML/CSS
Backend Frameworks: Spring Boot, Node.js, Microservices, RESTful APIs, Hibernate, Supabase, Firebase
Cloud & DevOps: AWS (EC2, S3, SQS/SNS), Docker, Kubernetes, CI/CD, Flyway, Cloudflare Workers
Databases: PostgreSQL, Turso DB, MySQL, Redis, Database Management
Frontend: Next.js, React.js, Tailwind CSS, Three.js, React Three Fiber, SolidJS, GSAP, React Flow
Mobile Development: Android, React Native, Jetpack Compose, Flutter, Dart Ecosystem
AI & Machine Learning: RAG, LLMs, Hugging Face, Model Fine-Tuning, OpenRouter, Groq, Mistral AI
Observability: Prometheus, Grafana, Loki, Axiom Monitoring
Build Tools & Integrations: CMake, FFmpeg, n8n, Activepieces, Swagger, Meta API
Core Subjects: System Design, Data Structures & Algorithms, Operating Systems, Computer Networks

EXPERIENCE

A2B Digital Solutions <i>Software Engineer Intern</i>	May 2026 – Jul 2026 <i>Remote</i>
- Constructed an enterprise admin management system handling complex multi-role workflows across admins, customers, employees, and vendors. - Implemented an AI-native workflow for front-end design, significantly accelerating development and reducing design time and costs by 90%. - Engineered production-grade backend microservices utilizing Spring Boot, Hibernate, and PostgreSQL with Flyway migrations. - Optimized image and PDF generation pipelines leveraging OpenHtmlToPdf, resulting in an >80% reduction in processing overhead; configured observability using Prometheus, Grafana, and Loki.	
CodeVeda Tech. <i>Technical Writer</i>	Nov 2025 – Dec 2025 <i>Remote</i>
- Authored a 240-page Spring Boot curriculum covering REST APIs, AOP, Transactions, Redis, Spring Security (JWT), and AWS integrations. - Designed and wrote a comprehensive GenAI curriculum from scratch, covering Hugging Face, LLMs, and model fine-tuning methodologies.	
Polarions <i>Automation Engineer</i>	Oct 2025 – Nov 2025 <i>Sweden (Remote)</i>
- Mentored 4 junior interns, teaching them n8n automation from scratch to build scalable integration pipelines. - Engineered a social media distribution system orchestrating n8n, Meta API, Google Workspace (Sheets/Drive), image generation APIs, and Cloudflare Workers.	
Sashel <i>Software Engineer Intern</i>	Jul 2025 – Oct 2025 <i>Remote</i>
Collaborated directly with the Founder and Tech Lead on core AWS architecture decisions, creating complex system architecture diagrams.	

- Architected a massive relational database schema for a complete e-commerce platform and deployed **4 production microservices** from scratch.
- Built **7 production-grade automation systems** utilizing **n8n**; integrated **Shiprocket** for auto-assigning delivery and **Razorpay** for complex payment holds (14-day escrow) with automated refunds.

PROJECTS

- 100xsystems** | *100xsystems.dev* | *github.com/100xsystems* **Feb 2026 – Present**
- Architected an EdTech platform actively used by **100+ developers**, synthesizing **25 years of engineering resources** into curated paths for **50+ programming languages** and system design concepts.
 - Developed scalable **CLI tools** using **Ink** and **Pastel**, alongside robust **CMS solutions** utilizing **React Quill**.
 - Engineered automated feeds aggregating live content from Hacker News, GitHub, Stack Overflow, NPM, dev.to, Medium, Reddit, Wikipedia, YC Companies, and Product Hunt.
 - Built comprehensive test suites using **Vitest** and **JUnit5** to reliably support massive course workflows and at-scale technical education.
- JU Learning** | *julearning.com* | *github.com/julearning* **May 2025 – Present**
- Launched a **zero-cost, infinite-scale platform** serving **1,400+ academic documents** to **500+ students** across Jammu University colleges (MBS, MIET, UIET) utilizing static-site generated meta JSON files.
 - Implemented a contribution pipeline leveraging **GitHub CI/CD**, enabling automated PR generation and decentralized dead-link reporting through **automated GitHub Issues**.
- Rose Social Media** | *rose-six-neon.vercel.app* **Jul 2026**
- Created a decentralized web client featuring an Instagram-inspired UI, multi-feed streams, and built-in filtering.
 - Integrated deeply with the **AT Protocol**, securely handling **lexicons**, user identities, and app views.
 - Interfaced with **Personal Data Servers (PDS)**, **labelers**, and **relays** to manage state across a decentralized network architecture.
- StartX** | *startx-zeta.vercel.app* **Apr 2026**
- Developed an AI startup validation platform routing across **multiple AI providers (Groq, Mistral, Cerebras)** powered by a low-latency **Turso Cloud DB**.
 - Integrated **Instamojo payments**, **Axiom** monitoring, and built **dynamic visual diagramming** using **Mermaid.js** and **GSAP**.
- DSA-IN-3D** | *github.com/aryanbatras/DSA-IN-3D* **Aug 2024**
- Constructed a multithreaded 3D ray tracing engine from scratch in pure **Java (3,500+ LOC, zero external dependencies)** over a **14-day** sprint.
 - Designed a fluent **builder API (.with())** enabling multi-structure scenes and real-time interactive rendering for **12+ algorithmic visualizations**.
 - Built a shared rendering pipeline integrating **FFmpeg** to dynamically generate high-quality **.mp4** animations of data structure operations.

CODING PROFILES & OPEN SOURCE

- GitHub Profile** **93 Repositories**
- github.com/aryanbatras* | **2,152 Contributions** (Last Year)
- Open-source developer, programming scalable 3D engines, decentralized network clients, and full-stack platforms.
- LeetCode Profile** **Top 60% Globally**
- leetcode.com/aryanbatra* | **Contest Rating: 1454**
- Consistently developing deep algorithmic problem-solving skills, having successfully solved **220 algorithmic challenges** focusing on Dynamic Programming, Greedy, and advanced Graph data structures.

CERTIFICATIONS, ACHIEVEMENTS & LEADERSHIP

- DevOps for Beginners: Docker, K8s, Cloud, CI/CD** **Sep 2025**
- udemy.com/certificate/UC-9d8f6f12-a657-477b-8569-e2ebd7e8d8bf/*
- Learned Containerization, cloud deployments, and continuous integration across AWS infrastructure.
- Author, "The Book of Rose"** **Jun 2024**
- bookofrose.vercel.app* | *Self-Published Philosophy Book*
- Wrote and published a 150+ page philosophical book exploring critical thinking and existential concepts.
- Peer Mentor, College Coding Club** **2023**
- MBS College of Engineering & Technology*
- Volunteered to help organize a **50+ member** technical coding community during freshman year.
 - Mentored and taught software development fundamentals and debugging best practices to fellow students.
